TourTurf® ADA
Anti-Drift Agent

Spray drift reduction. Increased spray accuracy. The orange peel extract reduces odour nuisance.

TourTurf® ADA Anti-Drift Agent is based on surfactants and extracts from oranges, specifically designed to reduce the number of fine droplets created during spraying with turfcare products. Smaller particles are more susceptible to being moved around by the wind. The elimination of these small particles results in increased spray accuracy by significantly reducing the spray drift without negatively impacting spray volume.

The elimination of these small particles results in increased spray accuracy by significantly reducing the spray drift without negatively impacting spray volume.

TourTurf® ADA contains an orange peel extract specifically designed to neutralise potent smells from other turf management and iron products; for example garlic, which has a strong odour, or other organic products. This makes the Spray Operator feel more comfortable when applying turf management products.

By using TourTurf® ADA, you can manage foam effectively and reduce the spray drift, which allows for safer spray operations and increases spray accuracy.

The orange scent of TourTurf® ADA masks unwanted odours. With constant spray drift control from start to finish, TourTurf® ADA is easy to use and has a convenient low application rate. Use TourTurf® ADA when a one-time application is difficult to accomplish due to drift limitations.

Guaranteed content

100 % proprietary blend of surfactant and orange peel extract.

pH: 6
Density: 1.01
Nozzles: Spray nozzles for larger droplets.
Storage: Minimum Temp.: 5 °C - Maximum Temp.: 40 °C

Application

As needed.

Foliar Spray Enchancement: 2L/ha mixed in 600 L of water.
Odour Control: 2L/ha mixed in 600 L of water.
Moss Resilient Turf: 4L/ha mixed in 600 L of water.
Stand-alone: 10L/ha mixed in 600 L of water.

Synergy

Order number

8589
12 x 1 litres per carton
