## Effective foam marker for turf sprayers. Avoid overlap and overapplication.

TourTurf® FBM Foam Bout Marker is a concentrated, high-performance foaming solution, which has been designed specifically for use in amenity turf. TourTurf® FBM produces a high-quality and firm foam. It aids spray operators to eliminate the problems caused by spray overlap and overapplication.

TourTurf® FBM produces a foam in large blobs which maintain their structure when sprayed. This gives spray operators an effective, long-lasting marker for treated areas. The product can be used directly on both amenity turf and bare soil.

One of the benefits of TourTurf® FBM is the concentrated, long-lasting formulation which shows in the economical application rate. It is ideal for use on fairways and other large areas of turf.

When applied, the size of the foam blobs will be dependent on the spraying pressure (air pressure can be adjusted if foam creation does not have the desired consistency when sprayed), boom diameter and diameter of end drop hoses.

### Guaranteed content

A proprietary liquid blend of surfactants.

### Application

As needed.

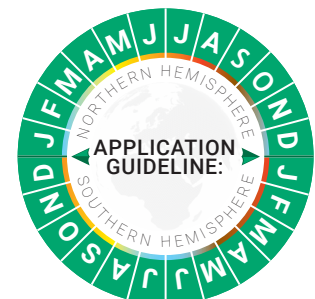

**Soft foam:** 1 litre to 125 litres of water.

**Firm foam:** 1 litre to 80 litres of water.

Synergy

Nozzles: Spray nozzles for small droplets.

### Order number

**8368**  
6 x 1 litres per carton
