### Improves the tournament colour and health of tees, fairways and pitches.

TourTurf® FWA Fairway Iron Aid + T-Factor is a liquid N-fertiliser with iron, sulphur and triacontanol. The product is made of a synergistic blend of urea nitrogen and an effective iron source. The product provides turf nutrition and its pH of 3 helps to acidify the soil profile. The pH of the solution in the spray tank will stay at a low level even when diluted with water. FWA is designed to improve the colour and health of turf on greens, tees, fairways and football pitches.

Iron is an essential minor nutrient for turf and is used by the plant for the synthesis of chlorophyll. The addition of triacontanol results in increased chlorophyll production, resulting in a higher photosynthesis output and plant growth. Triacontanol significantly improves recovery from disease or mechanical stress. It plays an essential role in alleviating plant stress during times of disease.

The use of TourTurf® FWA Fairway Iron Aid promotes a dark green colour, ideal for cutting the fairways and leaving a pattern. Iron is in the ferrous form, making it more readily available. This makes it an ideal product to use with major golf and soccer events. The nitrogen is in the form of urea, which is readily available to the plant and has low scorch potential. It promotes some additional growth without excessive fertilisation. The conditions for recovery after fungal diseases, can be improved with the use of FWA as an acidifying product, and even further with the use of a wetting agent like TourTurf® ECO.

#### Guaranteed content

Total Nitrogen (N) .....	12.2%
- of which Ureic (N) .....	12.2%
Iron (Fe) .....	4.8%
Sulphur (SO <sub>3</sub> ) .....	6.7%
Triacontanol .....	2.0%

pH: 3  
Density: 1.23  
Nozzles: Spray nozzles for larger droplets.

#### Application

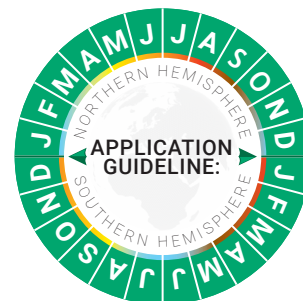

**Acidification:** Every 4 weeks.  
**Green up:** As needed.  
**Disease recovery:** As needed.

**Acidification:** 20L/ha mixed in 500 L water.  
**Green Up:** 10L/ha mixed in 500 L water.  
**Disease recovery:** 20L/ha mixed in 500 L of water.

Synergy with ManPlex, ECO Respond®. (Not with herbicide products)
