TourTurf® LPT

Leaf Penetrant Technology

Liquid spray enhancer + humectant

Sticker that ensures maximum leaf uptake of foliar fertilisers, biostimulants and other turf products.

TourTurf® LPT Leaf Penetrant Technology, designed for optimal leaf uptake of liquid fertilisers, biostimulants, and turf care products. It ensures rapid and efficient foliar product absorption, even in hot and dry conditions, thanks to its humectant technology.

TourTurf® LPT is a unique blend of amino acids, leaf penetrants, and a foliar 'sticking' agent. It's also fully compatible and mixable with plant growth regulators (PGRs), offering versatility. Achieving 99% uptake of tank mixed products in 20 minutes, TourTurf® LPT enhances leaf coverage, retaining foliar turf products. Its amino acid package bolsters natural defences, stimulating root growth and damage recovery.

TourTurf® LPT ensures swift nutrient uptake across diverse conditions, anchored in humectant and organic facilitator technology. Organic facilitators chelate nutrients for plant benefit.

Greenkeepers use foliar fertilisation and "spoon feeding" to maintain turfgrass. TourTurf® LPT combats drying with humectants, ensuring nutrient availability.

TourTurf® LPT optimizes foliar nutrient uptake, sustaining plant health in various conditions. It is also completely rainfast in only 30 minutes. Use LPT for all you tank mixes and optimize the use of critical resources.

Guaranteed content

A blend of dipropylene glycols, natural and polymer surfactants and a liginosulphonate humectant system with an extract from *Camellia Sinensis*.

pH: 4.8

Density: 1.05

Nozzles: Spray nozzles for small droplets.

Application

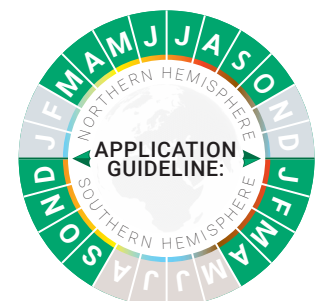

As needed.

1L mixed per 100 L of water.

Synergy

Order number

8572
4 x 5 litres per carton
