Alleviate micronutrient deficiencies and provide stunning colour with an easy to use granular.

TourTurf® MPG Micro Pack Granular is a mineral micronutrient fertiliser for turf, which contains a range of micronutrients like magnesium, calcium, iron and manganese, that rectify the most common trace element deficiencies experienced in turfgrass. Use TourTurf® MPG to keep the grasses well supplied with essential nutrients, improve chlorophyll formation, make turf healthy and produce stunning colour.

This micro-granule is produced using a compounded method, so ensuring that each granule contains all the elements in the formulation.

TourTurf® MPG contains a high level of magnesium, which is an essential element all plants require to manufacture chlorophyll in the process of photosynthesis. Together with the lower level of iron, these two elements give turfgrass a stronger, natural green colour.

The inclusion of calcium, together with magnesium, also gives a localised pH buffering capacity in the soil making nutrients more available to the plant. This improves nutrient uptake efficiency (NUE) of not just the elements in this product but all nutrients in close proximity in the soil. Apply before rain or irrigate after application.

Guaranteed content

Magnesium (MgO)	22.0%
Calcium (CaO)	8.5%
Sulphur (SO ₃)	20.0%
Iron (Fe)	5.0%
Manganese (Mn)	3.0%
Zinc (Zn)	1.0%
Copper (Cu)	1.0%
Boron (B)	0.1%
Molybdenum (Mo)	0.1%

Apply before rain or irrigate after application.

pH: 6.0
The product is low in chlorine.

Application

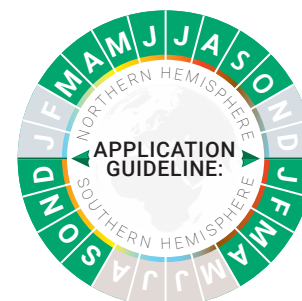

2-3 times a year.

Deficiency: 200kg/ha.
Turf Resiliency: 200kg/ha.
Disease Recovery: 300kg/ha.

Size 1-2mm.
SGN 120.
Synergy with LSG

Order number

8761SK
50 x 20kg bags per industrial pallet
